Existing Ownership

MISSION & VALUE PROPOSITION

Mission:

Build Veritris® into a multi-utility digital platform that manages the customer relationship across connectivity, communications, cloud services, and electricity through a single-pane interface

Value:

Use telecom customer relationships and network infrastructure to cross-sell connectivity, managed technology, retail energy where legally permitted, and wholesale power-market services.

ENERGY STRATEGY: REGULATORY-AWARE

Texas retail: Competitive retail entry / REP-style model, subject to licensing and market rules.

Oklahoma: Do not assume broad retail choice; pursue PSO/OG&E partnerships, DER, demand response, procurement and software services.

Wholesale: SPP market participation, bilateral supply/offtake, PPAs, origination and load-shaping through an authorized power-marketing entity.

5-YEAR INTEGRATED OPERATING MODEL (ILLUSTRATIVE)

Year	Telecom Rev.	Retail Energy Rev.	Wholesale Rev.	Total Rev.	EBITDA	Indicative EV
1	\$0.90M	\$0.74M	\$1.72M	\$3.36M	\$0.07M	\$9-16M
2	\$2.50M	\$2.97M	\$6.88M	\$12.35M	\$0.52M	\$18-31M
3	\$5.20M	\$7.43M	\$17.20M	\$29.83M	\$1.89M	\$34-57M
4	\$8.50M	\$14.87M	\$34.40M	\$57.77M	\$4.17M	\$56-92M
5	\$12.50M	\$29.74M	\$60.20M	\$102.44M	\$7.93M	\$79-139M

Retail electricity uses May 2026 Texas commercial average of 8.26¢/kWh, 18 MWh/customer/year and customer growth of 500 → 20,000. Wholesale uses SPP 2025 day-ahead average of \$34.40/MWh with traded volume scaling 50 → 1,750 GWh. Retail EBITDA margin ramps 3% → 9%; wholesale trading/origination margin modeled at 2.5%.

SALES & MARKET ENTRY

- Bundle Fiber/5G + Managed IT + Energy procurement for SMB and enterprise accounts.
 - Use existing telecom relationships to lower CAC and increase revenue per customer.
 - Target Texas competitive retail markets for licensed retail electricity sales. Target PSO/OG&E and large-load customers for demand response, DER and energy software in Oklahoma.
- Use SPP/bilateral channels for wholesale origination, PPAs and load-shaping.

VALUATION & SERIES A RETURN FRAMEWORK

Current management valuation:	\$50M
Series A raise / post-money:	\$2.5M / \$50M*
Illustrative Series A ownership:	5.0%*
Year-5 sum-of-parts EV:	\$79M-\$139M
Implied Series A stake value:	\$18.7M-\$30.7M
Illustrative gross MOIC:	7.5x-12.3x

Valuation method: telecom at 2.5x-4.0x revenue plus energy at 6x-10x EBITDA. Gross electricity revenue is not valued at a telecom revenue multiple.

VERITRIS SERIES A VALUATION BRIDGE

\$2.5M Series A Preferred Round | 5.0% Equity | \$10M Asset Base | \$50M Post-Money | \$100M+ Five-Year Target

\$10.0M Current asset base	\$47.5M Pre-money valuation	\$2.5M Series A raise	\$50.0M Post-money valuation	5.0% Series A ownership	95.0% Existing ownership
--------------------------------------	---------------------------------------	---------------------------------	--	-----------------------------------	------------------------------------

INVESTMENT THESIS

Veritris is positioned as a vertically integrated digital infrastructure platform, not only a telecom services company.

- Fiber and fixed wireless assets create customer acquisition and recurring connectivity revenue.
- Managed tech, cloud, security and AI increase ARPU and retention.
- Retail/wholesale energy creates a second infrastructure revenue vertical.
- Wholesale energy software creates a scalable ARR layer around forecasting, settlement, reporting and risk.

Series A ask: \$2.5M for 5% equity, implying \$47.5M pre-money and \$50M post-money.

VALUE STACK

Fiber + FWA

Business internet, backup, network services and infrastructure rights.

Managed Tech

Cloud, cybersecurity, AI/ML engineering and managed services.

Retail Energy

Commercial electricity/procurement where legally permitted.

Wholesale Energy

SPP/ERCOT/bilateral origination, PPAs, load shaping and settlement.

Energy Software

Cloud-native wholesale energy operating system: forecasting, ETRM-lite, settlements, risk and APIs.

YEAR-5 SUM-OF-PARTS VALUATION

Division	Conservative	Base	Upside
Fiber/FWA	\$31M	\$40M	\$50M
Energy Software	\$24M	\$33M	\$42M
Wholesale Energy	\$9M	\$12M	\$15M
Retail Energy	\$12M	\$17M	\$22M
Strategic Assets	\$3M	\$5M	\$10M
Total EV	\$79M	\$107M	\$139M

Base case implies approximately 2.1x gross MOIC for Series A before future dilution; upside case implies approximately 2.8x.

Valuation uses telecom revenue multiples, software ARR multiples, and energy EBITDA/margin multiples. Gross electricity revenue is not valued at a telecom multiple.

FIVE-YEAR OPERATING MODEL & CUSTOMER ACQUISITION

Revenue model includes fiber/fixed wireless services, retail energy, wholesale energy, and energy wholesale software ARR.

Year	Fiber/FWA Rev.	Retail Energy Rev.	Wholesale Rev.	Energy Software ARR	Total Revenue*	EBITDA
1	\$0.90M	\$0.74M	\$1.72M	\$0.25M	\$3.61M	\$0.07M
2	\$2.50M	\$2.97M	\$6.88M	\$0.75M	\$13.10M	\$0.52M
3	\$5.20M	\$7.43M	\$17.20M	\$1.80M	\$31.63M	\$1.89M
4	\$8.50M	\$14.87M	\$34.40M	\$3.50M	\$61.27M	\$4.17M
5	\$12.50M	\$29.74M	\$60.20M	\$6.00M	\$108.44M	\$7.93M

*Total Revenue includes software ARR to show platform opportunity; ARR is not separately added to EBITDA without cost assumptions.

CUSTOMER / ASSET SCALING TARGETS						CUSTOMER ACQUISITION ENGINE	
Metric	Y1	Y2	Y3	Y4	Y5	Acquire	Fiber, FWA or managed IT business customer
Fiber/FWA subs/equivs.	900	2,500	5,200	8,500	12,500	Attach	5G/FWA backup, cybersecurity and cloud/AI services
Retail energy customers	500	2,000	5,000	10,000	20,000	Expand	Retail energy procurement or demand-response service
Wholesale volume managed	50 GWh	200 GWh	500 GWh	1,000 GWh	1,750 GWh	Optimize	Wholesale pricing, load shaping and settlement support
Energy software customers	4	12	25	45	70	Software	Forecasting, reconciliation, risk and reporting dashboards
Software ARR	\$0.25M	\$0.75M	\$1.80M	\$3.50M	\$6.00M	Retain	Higher ARPU, lower churn and stronger account control
SERIES A USE OF PROCEEDS - 36 MONTH RUNWAY 35% - Network/fiber/FWA infrastructure and integrations 20% - Sales, channel development and customer acquisition 20% - Energy software development and data/market integrations 15% - Operations, personnel and customer support 10% - Compliance, energy licensing/market access and reserve						Target accounts: SMBs, multi-site businesses, dental/medical offices, landlords, facilities, data-dependent companies and energy-sensitive commercial accounts.	
						MILESTONES THAT DEFEND THE \$50M VALUATION	
						• Verify and document \$10M asset base and any liens/liabilities.	
						• Convert pipeline into signed fiber/FWA and managed-services contracts.	
						• Secure energy-market partner, REP pathway, SPP/ERCOT access or licensed affiliate strategy.	
						• Deliver MVP of wholesale energy software with forecasting, settlement and reporting modules.	
• Demonstrate blended customer ARPU expansion through telecom + energy cross-sell.							

MARKET DATA, VALUATION METHOD & COMPETITIVE CONTEXT

Fiber broadband market

U.S. FTTH passings are approaching 100M and fiber passes more than 60% of primary households. Non-Tier-1 providers account for about 40% of cumulative FTTH deployment, supporting a regional/independent fiber thesis.

Wholesale power / SPP

SPP market pricing provides a wholesale modeling benchmark; the operating model previously used approximately \$34.40/MWh day-ahead and \$32.78/MWh real-time reference values.

Valuation method

Fiber/FWA: revenue multiple. Energy software: ARR multiple.
Retail/wholesale energy: EBITDA or margin contribution. Strategic assets: only non-operating or separately identifiable rights to avoid double counting.

Competitor context

AT&T, Verizon, AEP and NextEra demonstrate the scale value of converged communications and energy infrastructure. Veritris should be priced as an early-stage regional platform with asset backing, contract execution and software upside.

Electricity market

U.S. retail electricity revenue reached approximately \$553.3B in 2025, including \$200.3B in commercial revenue and \$89.9B in industrial revenue. This is the customer-spend pool targeted through energy procurement, retail and wholesale services.

ETRM / energy software

Public market-research estimates vary, but recent ETRM software reports cluster around roughly \$1.5B-\$2.0B in global 2025/2026 market size, with forecasts toward \$2.5B-\$3.2B by the mid-2030s. Veritris targets a focused commercial/wholesale energy workflow.

Investor framing

A \$50M post-money price is aggressive but defensible if the \$10M asset base is documented and the company can show pipeline-to-contract conversion, recurring revenue, and an energy software path toward \$6M ARR in Year 5.

SOURCE NOTES & DISCLAIMERS

Sources used for market context: Fiber Broadband Association 2025 North American FTTH Deployment and Market Update; U.S. Energy Information Administration Electric Power Monthly Tables 5.1 and 5.2; SPP Annual State of the Market materials; public ETRM/energy software market research estimates from market research publishers. Figures are management scenarios and illustrative valuation models, not guarantees, audits, securities offering documents or professional advice.
Requested Series A structure: \$2.5M investment for 5.0% equity implies a \$47.5M pre-money and \$50.0M post-money valuation. Future \$100M+ target valuation depends on customer acquisition, contract execution, software development, energy-market access, retention, margins and future dilution.
